Vue Js Lab One

- **Try all lecture points**
1- Create an array of books , each book object contains ISBN , Name , Category , Image , number of pages , author , price
2- Display books names as list (ul) and make title for each li as book author
3- Using boot strap framework , display every book as card as following

- If number of pages <50 assign css class less else assign css class more for card
- When user click add to list button , this book will be added to wishlist array wich can be displayed as a table using button display wish list .
- Add option to user to remove books from wish list
- Using Intl API create format for price as SAR
